

Hiring Notice

CelebAI Technologies

CelebAI is a specialized Artificial Intelligence solutions company. Our advanced training data, benchmarking and testing solutions allow our enterprise and high-tech global customers to create sophisticated and highly intelligent applications across various industries such as Automotive, Retail and large Data Centers. With our deep expertise in AI/ML/DL, our solutions are helping our customers taking their solution to market much more quickly and creating true business value. We take pride in having an amazing team that is obsessed to deliver excellence to our customers through continuous innovation and pro-activeness.

Why should you join CelebAI?

We are a team of very talented and passionate engineers who are not users, but creators of leading technology in the AI, ML and Deep Learning space. The problems we are working on are unique enough, but what makes this all the more fun is the kind of minds we are working "WITH" to solve these problems. Young engineers who have joined us say that they really enjoy the additional learning they get because they are being mentored by the experienced professionals.

The other reason which we are very proud of stating, as the reason to join CelebAI is the fact that we at CelebAI follow a truly product-oriented mindset when it comes to our work environment. This differentiates us from most of other organizations in the National Capital Region operating in this space. We have a culture of open communication and supportive learning for freshers and this goes a long way in creating the perfect work environment which engineers like "YOU" are looking for.

Finally, joining a company which is all set to double its headcount in the near future means that you will work in a high growth environment where the right attitude and proven talent will mark you for growth in a way that would not be possible in other much larger herd mentality "IT" Companies.

If this excites you, we are eager to have you onboard at CelebAI. Best of luck for your selection process.
